

ABSTRACT OF ENVIRONMENTAL LAW AND PRACTICE IN NIGERIA

BY AMOKAYE G. OLUDAYO

The rapid rate of regulation and the wide spectrum of activities and substances falling under environmental control have necessitated a succinct, accurate, and up-to-date text on current municipal and international environmental law for legal practitioners and other professionals. This treatise is a major comprehensive contemporary effort to bring the right blend of ecology and law in the growing legal subject of international environmental law, the principles and rules relating to the protection of environment and conservation of natural resources in Nigeria. In addition to in-depth descriptions of all the problems that beset our planet's air, soil, water, wildlife, plant and atmosphere, this book thoroughly examines the complex issues that lie in the heart of environmental law practices: liability, enforcement, procedural obligations and international environmental obligations. It comprehensively details in fifteen chapters the municipal and international legal framework for sustainable development and environmental management.

This book is undoubtedly an essential reference work and textbook for practitioners, law students, policy makers and academics working in the field of international environmental law, oil and energy law, politics, geography, environmental economics, environmental studies and for those non-government organizations engaged in sustainable development work. Anyone with an interest in environmental law, from a beginning student to an experienced activist, corporate counsel or policymaker, will find it to be of enormous and lasting value.
